1 Scope

1.1 This Equipment Note gives guidance on the equipment required for an Adult Acute Day Patient Section at a District General Hospital. The guidance in this Equipment Note replaces the information given in Hospital Equipment Note No 12, Out Patient Department, which related to the requirements of a day ward and also the guidance on minor operating theatres in parts (b) and (c) of the Note issued in November 1963. It is intended to be read in conjunction with Health Building Note No 38 which indicates the purpose, objectives in the investigation and treatment of patients on a day basis.

1.2 No provision in this Note has been made for accommodation of children, psychiatric, geriatric or accident and emergency patients as facilities will normally be provided elsewhere.

Group 2: Items buildi hat these classifications be engine f planning.

3 Spe n respect of this note

3.1 The equipment detailed in this Note is regarded as generally suitable for an adult acute day patient nursing section comprising 14 day beds together with 16 sitting and recovery places for patients and a treatment suite. Alternatively equipment required for a nursing section with a treatment room and treatment bathroom when an operating theatre has been provided. The equipment detailed conforms to the accommodation described in Health Building Note No 38 and has been listed in room (or space) sequence conforming to that Building Note.

3.1.1 For the patient nursing section (ward) accommodation, since the combination of single and multiple bed — wards will vary according to local circumstances, the

equipment has been shown on a unit basis ie per bed space or ward as appropriate so enabling any arrangement to be catered for.

3.2 Some minor items have been grouped under general headings and these have been given aggregated cost allocations in arriving at the cost guide figures. This has been done to avoid detailed listing relatively inexpensive small items and to afford a degree of flexibility in their choice.

3.3 It is realised that the equipment requirements in particular departments may vary from the recommendations because of the nature of the work undertaken and the techniques employed, and some variations will often be necessary within the Basic Lists. As indicated in Equipment Note No 1 Section V, the requirements will need to be examined in consultation with the head of the department or main users.

3.4 Some fixed items of equipment (Group 1) have already been mentioned, and costed, in the Building Note, but it has been thought useful to include them again in the Equipment Note which represents a comprehensive review of requirements. Reference should be made, however, to the Building Note Part 3 Engineering Services — for further information on mechanical services and electrical installation. It is particularly important that before purchasing equipment requiring services there should be adequate consultation to ensure compatibility. Structural elements, floor coverings, non specialised heating and lighting fittings and similar items which are basic to any building are not included in the Equipment Note.

3.5 Throughout the schedule, for the sake of uniformity references to dispenser, paper towels are associated with holder, sack, free standing. Suitable adjustments will need to be made where linen towels are to be used. Similarly with soap dispensers where bars of soap are preferred.

3.6 In all cases metric measurements etc have been quoted wherever possible.

3.7 It is for individual health authorities to make rules about smoking in health buildings under their control and management (see Departmental Circular HC(77)(3). Smoking is undesirable and bans in acute medical and surgical nursing sections have been successfully introduced into hospitals where the medical and nursing staff have co-operated in enforcing them. Some patients who do not smoke become distressed and discomforted by the presence of tobacco smoke. Where smoking is permitted in nursing sections it should be confined to specific areas and all patients given the opportunity to choose a smoke free area. While smoking should not be encouraged, but where special areas are made available for smokers, eg quiet rooms, they should not be in any way better or more attractive than non-smoking accommodation. In this Equipment Note no provision has been made for ash trays.

3.8 In the selection of the equipment required the Department of Health and Social Security Activity Data Base has been used to identify the specific items of equipment to enable the function, task, activities to be performed in any particular room, space bay or corridor and the equipment needed to meet those needs. A list of Activity Data, Space and Unit Sheets is provided at pages 5-10.

4 Damage by equipment to buildings

4.1 Many items of equipment are potential causes of recurring damage to the fabric of NHS buildings and other equipment. Damage can be minimised not only by incorporating protective materials in building structure but also by ensuring that the equipment selected is designed to eliminate, as far as practicable, those features which are liable to cause damage. Particular attention is drawn to BS 4322/68 which sets out recommendations for the buffering of hospital vehicles such as trolleys and refers less specifically to other categories of equipment. Precautions should also be taken to prevent damage caused by projections from stationary equipment.

4.2 Early co-operation with the architects and designers is essential.

5 Cost

5.1 No cost guidance is given in this Note because such costs rapidly become out-dated.

In this Note no account has been taken of:

1. Items supplied from the Hospital Sterilization and Disinfecting Unit.

2. Catering items which it is assumed will be met from a centralised catering service delivering individual trays or plated meals from a central kitchen and that a central washing up service is available.

5.2 The room cost guide figures for basic equipment (Groups 2, 3 and 4) applied to the standard schedules of basic accommodation together with individual item costs for equipments are contained in the Standard Equipment Scheduling System. The cost allowance for this department will be published from time to time by the Department when revising the Equipment Cost Allowance Guide (ECAG).

5.3 The Standard Equipment Scheduling System provides a computer based room library catalogue with each room identified by a code number. The room code number appropriate to the rooms included in this Equipment Note are listed in pages 5-10. The Department of Health and Social Security Data Base should be consulted for obtaining schedules of equipment and updated cost allowances.

5.4 The data base of the Standard Equipment Scheduling System should be used where a basic room needs to be modified to meet local requirements. The room library offers a wide range of rooms and departments with equipment listed together with related costs.

5.5 The Equipment Scheduling System offers many advantages in the preparation of schedules of equipment, budgetary control and the commissioning of a project.
